Attorney Docket No. 21465-508001US

<u>AMENDMENT</u>

Amendments to the Claims:

Please amend the claims as follows, without prejudice:

In the Claims

- 1. (Currently Amended) A method for amplifying one or more nucleic acids onto a bead comprising the steps of:
- (a) forming a water-in-oil emulsion to create a plurality of aqueous microreactors wherein [at least one] a plurality of the microreactors comprises on average one single stranded nucleic acid template, a single bead with a first population comprising a plurality of molecules of a first primer species disposed thereon, and an amplification reaction solution comprising a second population comprising a plurality of molecules of the first primer species and a plurality of molecules of a second primer species and reagents necessary to perform nucleic acid amplification, wherein the first primer species is capable of binding to the single stranded nucleic acid template, the second primer species is capable of binding to a complementary strand of the single stranded nucleic acid template, and further wherein the molecules of the second primer species and the molecules of the first population of the primer species are each present in greater numbers within the aqueous microreactors than the number of molecules of the [of the] second population of the first primer species;
- (b) asymmetrically amplifying the single stranded nucleic acid template and the complementary strand to the template strand in the amplification reaction solution to form a population of amplified copies of the single stranded template nucleic acid, wherein substantially all of the molecules of the second population of the first primer species in the amplification reaction solution are depleted;
- (c) binding a plurality of the asymmetrically amplified copies of the single stranded template nucleic acid to the first population of the first primer species on the bead in [the] a plurality of the microreactors [microreactor], wherein at least 100,000 bead bound

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

complementary strands are extended from the first primer species to form a population of beads

with amplified nucleic acid template bound thereto;

(d) breaking the [aqueous microreactors] emulsion to release [at least one of the

nucleic acid bound beads] the population of beads with amplified nucleic acid template bound

thereto from the microeactors and away from the amplification reaction solution comprising

unbound amplification products; and

(e) [recovering the nucleic acid bound beads] enriching for beads with amplified

nucleic acid template bound thereto by removing beads to which no nucleic acid is bound; and

(f) [sequencing the bead bound complementary strands] distributing the beads with

amplified nucleic acid template bound thereto onto an array.

2. (Original) The method of claim 1, wherein a majority of the microreactors include a

single nucleic acid.

3. (Previously Presented) The method of claim 1, wherein said amplification reaction

solution is a polymerase chain reaction solution further comprising nucleotide triphosphates, a

thermostable polymerase, and a buffer compatible with polymerase chain reaction conditions.

4. (Cancelled).

5. (Cancelled).

6. (Original) The method of claim 1, wherein said emulsion additionally contains emulsion

stabilizers.

7. (Original) The method of claim 6, wherein said emulsion stabilizers are selected from the

group consisting of Atlox 4912, Span 80, and combinations and mixtures thereof.

8. (Original) The method of claim 1 wherein said emulsion is heat stable.

9. (Original) The method of claim 8 wherein said emulsion is heat stable to 95°C.

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

10. (Original) The method of claim 1, wherein amplification is carried out by a method

selected from the group consisting of transcription-based amplification, rapid amplification of

cDNA ends, continuous flow amplification, and rolling circle amplification.

11. (Original) The method of claim 1, wherein the emulsion is formed by the dropwise

addition of the nucleic acid templates, beads, and amplification reaction solution into an oil.

12. (Currently Amended) The method of claim 1, performed with at least 10,000 nucleic

acid[s] templates.

13. (Currently Amended) The method of claim 1, performed with at least 50,000 nucleic

acid[s] templates.

14. (Currently Amended) The method of claim 1, wherein the microreactors have an average

size of 50 µm.

15. (Previously Presented) The method of claim 1, wherein each bead binds more than 10,000

asymmetrically amplified copies of the single stranded nucleic acid template.

16. (Withdrawn) A library comprising a plurality of nucleic acid molecules, wherein each

nucleic acid molecule is separately immobilized to a different bead, and wherein each bead

comprises over 1,000,000 clonal amplification copies of each nucleic acid molecule, wherein the

library is contained in a single vessel.

17. (Withdrawn) The library of claim 16, wherein the nucleic acid molecules are selected

from the group consisting of genomic DNA, cDNA, episomal DNA, BAC DNA, and YAC DNA.

18. (Withdrawn) The library of claim 16, wherein the genomic DNA is selected from the

group consisting of animal, plant, viral, bacterial, and fungal genomic DNA.

19. (Withdrawn) The library of claim 18, wherein the genomic DNA is human genomic DNA

or human cDNA.

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

20. (Withdrawn) The library of claim 16, wherein the bead has a diameter of 2 microns to

100 microns.

21. (Withdrawn) The library of claim 16, wherein the bead is a sepharose bead.

22. (Currently Amended) [A] The method of claim 1 [for amplifying a nucleic acid further

comprising the step[s] of:

[(a) providing one single stranded nucleic acid template to be amplified;

(b) providing a solid support material comprising a generally spherical bead having a

diameter about 2 to about 40 µm, wherein the bead comprises a plurality of molecules of a first

population of a first primer species disposed thereon capable of binding to the nucleic acid

template;

(c) mixing the nucleic acid template and the bead in an amplification reaction

solution comprising a plurality of molecules of a second population of the first primer species, a

second primer species and reagents necessary to perform a nucleic acid amplification reaction in

a water-in-oil emulsion, wherein the first primer species is capable of binding to the single

stranded nucleic acid template, the second primer species is capable of binding to a

complementary strand of the single stranded nucleic acid template and further wherein the

molecules of the second primer species and the molecules of the first population of first primer

species are each present in greater numbers within the aqueous microreactors than the number of

molecules of the second population of the first primer species;

(d) asymmetrically amplifying the single stranded nucleic acid template and the

complementary strand of the single stranded nucleic acid template in the amplification reaction

solution using the second population of the first primer species and the second primer species to

form a population of amplified copies of the single stranded template nucleic acid, wherein

substantially all of the molecules of the second population of the first primer species in the

reaction solution are depleted;

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

(e) binding a plurality of the asymmetrically amplified copies of the single stranded

template nucleic acid to the first population of the first primer species on the bead, wherein at

least 100,000 bead bound complementary strands are extended from the first primer species;

(f) recovering the nucleic acid bound beads; and]

sequencing the [bead bound complementary strands] amplified nucleic acid

templates.

(g)

23. (Withdrawn) A kit for conducting nucleic acid amplification of a nucleic acid template

comprising:

(a) a nucleic acid capture bead;

(b) an emulsion oil;

(c) one or more emulsion stabilizers;

(d) instructions for performing the method of claim 1 or claim 22.

24. (Cancelled).

25. (Currently Amended) The method of claim [24] 1 wherein [the] enrichment step (f) is

performed [by affinity purification with] using magnetic beads having primers attached thereto

that bind the amplified nucleic acid template.

26. (Cancelled)

27. (Currently Amended) The method of claim 1 [or 22], wherein at least 1,000,000 copies of

each target nucleic acid molecule are bound to each bead.

28. (Currently Amended) The method of claim 1 [or 22], wherein between at least 1 to

20,000,000 copies of each target nucleic acid molecule are bound to each bead.

29. (Currently Amended) The method of claim 1 [or 22], wherein the beads are sepharose

beads.

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

30. (Cancelled).

31. (Cancelled).

32. (Currently Amended) The method of claim 25, further comprising, after step (e), the

step[s] of:

separating the [template carrying] beads with amplified nucleic acid template thereon away from

the [and] magnetic beads [bead; and removing the magnetic beads with a magnetic field].

33. (Currently Amended) The method of claim 32, wherein the separating is achieved by

incubation at a temperature greater than 45°C or by incubating the [template carrying beads] with

amplified nucleic acid template thereon and the magnetic beads in a solution with a basic pH.

34. (Cancelled).

35. (Withdrawn) The method of claim 34 further comprising transcribing and translated the

nucleic acids to generate at least 10,000 copies of an expression product.

36. (Withdrawn) The method of claim 35, wherein said expression product is bound to said

beads by a binding pair selected from the group consisting of antigen/antibody, ligand/receptor,

6Xhis/nickel-nitrilotriacetic acid, and FLAG tag/FLAG antibody binding pairs.

37. (Withdrawn) The method of claim 35, wherein the method produces a clonal population

of proteins.

38. (Withdrawn) The method of claim 37, wherein the proteins are selected from the group

consisting of antibodies, antibodies fragments, and engineered antibodies.

39. (Withdrawn) An emulsion comprising a plurality of thermostable microreactors, wherein

the microreactors are 50 to 200 µm in diameter and comprise a biological reaction solution..

40. (Withdrawn) The emulsion of claim 39, wherein the biological reaction solution

comprises reagents for performing polymerase chain reaction amplification.

Date of Deposit: April 22, 2010

Attorney Docket No. 21465-508001US

41. (Withdrawn) The emulsion of claim 39, wherein the biological reaction solution

comprises reagents for performing coupled transcription and translation reactions.

42. (Withdrawn) The emulsion of claim 40 or claim 41, wherein the plurality of

microreactors comprise a nucleic acid template.

43. (Withdrawn) The emulsion of claim 42, wherein the plurality of microreactors comprise

one or fewer nucleic acid templates.

44. (Withdrawn) The emulsion of claim 43, wherein the plurality of microreactors comprise

one or fewer beads that bind to the nucleic acid templates.
